

**SYLLABUS TO PHY 431,  
INTRODUCTION TO NUCLEAR AND PARTICLE PHYSICS**

**PHY 431: Introduction to Nuclear and Particle Physics (3 credits)**

lectures Tue-Thu

Instructor: Prof. Edward Shuryak

Email [edward.shuryak@stonybook.edu](mailto:edward.shuryak@stonybook.edu) —

Office hours: TBD

**Purpose:**

This introductory course is designed to provide an overview of modern Nuclear and Particle physics. There are many textbooks, but they mostly cover basic 20-th century material. I expect to include more recent discoveries, e.g. of quark-gluon plasma and merging neutron stars on nuclear side, and Higgs discovery at LHC. Therefore I will provide lecture files as we go, with information collected from multiple sources.

**Approximate content:**

- (\*) Discovery of nuclei: the Rutherford experiment
- (\*) Tunneling, very long-living isotopes
- (\*) The map of the nuclear world
- (\*) Nuclear forces, Yukawa potential, deuteron and  $He^4$
- (\*) The shell model
- (\*) Cosmological nucleosynthesis
- (\*) Processes in the stars
- (\*) The nuclear fusion program, reactors and energy generation
- (\*) neutron stars, their life and merger: heavy isotopes
- (\*) accelerators and detectors, elements of relativistic kinematics
- (\*) Quantum chromodynamics, quark types

- (\*) nonrelativistic hadrons: heavy quarkonia
- (\*) mesons and baryons in quark models. The 4 and 5-quark states
- (\*) QCD symmetries broken in the vacuum, the condensates and the pions
- (\*) heavy ion collisions and discovery of quark-gluon plasma
- (\*) Standard model of electroweak interactions, breaking of parity P and C with CP conserved
- (\*) gauge bosons, leptons and neutrinos
- (\*) CP violation: mass matrix for quarks and leptons
- (\*) cosmological puzzles: dark matter and cosmological constant

**What to Expect:**

This course will require you to carry out homework assignments weekly: as usual, doing these problems reinforce the material presented at the lectures. This course will not involve a lot of mathematics new to you, although for deuterons and quarkonia we will need to solve quantum Schrodinger equation numerically and do multiple plots of the results.

**Preparation for future HWs** I will advocate usage of Mathematica not only in few occasions when it will be necessary, but everywhere. Yes, it will require some learning curve but will save you a lot of time! Please upload free version from University web and learn elementary tasks like plotting a formula, or substituting “data” into an expression. (Note that one should put in the numerical values WITH their units, which will let you know what units the result will have.)

**Course Grading and Attendance:**

The grading for the course will be based on the completion of weekly homework assignments (1/2) , and a final exam (1/2).

**Student Accessibility Support Center (SASC) Statement:**

If you have a physical, psychological, medical or learning disability that may impact your course work, please contact the Student Accessibility Support Center (SASC), ECC (Educational Communications Center) Building, room 128, (631) 632-6748. They will determine with you what accommodations, if any, are necessary and appropriate. All information and documentation is confidential. Students who require assistance during emergency evacuation are encouraged to discuss their needs with their professors and the staff at the Student Accessibility Support Center (SASC). For procedures and information go to the following website: <http://www.stonybrook.edu/ehs/fire/disabilities>

**Academic Integrity Statement:**

Each student must pursue his or her academic goals honestly and be personally accountable for all submitted work. Representing another person's work as your own is always wrong. Faculty are required to report any suspected instances of academic dishonesty to the Academic Judiciary. Faculty in the Health Sciences Center (School of Health Technology and Management, Nursing, Social Welfare, Dental Medicine) and School of Medicine are required to follow their school-specific procedures. For more comprehensive information on academic integrity, including categories of academic dishonesty, please refer to the academic judiciary website at

[http://www.stonybrook.edu/commcms/academic\\_integrity/index.html](http://www.stonybrook.edu/commcms/academic_integrity/index.html)

**Special note regarding plagiarism and dishonesty:** All instances of suspected plagiarism or academic dishonesty will be brought before the Academic Judiciary Committee. All parties suspected (both the copier and the person who produced the original work) will be held accountable for any instance of plagiarism or dishonesty. You are responsible for protecting the security of your programming assignments by making sure that your directories are not world readable. If you are unsure how to secure your home directory see the instructor immediately.

**Critical Incident Management**

Stony Brook University expects students to respect the rights, privileges, and property of other people. Faculty are required to report to the Office of Student Conduct and Community Standards any disruptive behavior that interrupts their ability to teach, compromises the safety of the learning environment, or inhibits students' ability to learn. Faculty in the HSC Schools and the School of Medicine are required to follow their school-specific procedures. Further information about most academic matters can be found in the Undergraduate Bulletin, the Undergraduate Class Schedule, and the Faculty-Employee Handbook.
